1. Summary

This report presents results from the Hawai‘i Farm Management Needs Assessment (Assessment), conducted by the Agricultural Finance extension program of the College of Tropical Agriculture and Human Resilience (CTAHR) at the University of Hawai‘i at Mānoa. The Assessment asked agricultural producers, producer associations and cooperatives, and organizations that serve Hawai‘i’s food system where farms most needed support. Topics included financial management and business planning, risk management, workforce, access to loans and grants, farm succession, associations and cooperatives, marketing, and new crops.

Results are reported statewide and for each of Hawai‘i’s four counties, Hawai‘i County, Honolulu County, Maui County, and Kaua‘i County. The Agricultural Finance extension program will use these results to identify, prioritize, and deliver the programs and resources that are most needed.

Section 2 (Methodology) describes the survey and analysis. Section 3 (Findings by County) summarizes results for each county. Section 4 (Findings by Topic) presents statewide results for each survey topic and highlights key differences among counties, and Section 5 (Program Priorities) outlines the priorities for the Agricultural Finance extension program.

1.1 Key Findings

The survey received 84 responses between September and November 2025: 57 from Hawai‘i County, 12 from Honolulu County, 9 from Maui County, and 6 from Kaua‘i County. With fewer than 10 responses each, Maui and Kaua‘i county results are reported as counts.

1. **Labor costs and worker availability are the most widely shared concerns in every county.** High labor costs were the top workforce concern statewide (56 out of 84, or 67%) and in all four counties, ranging from 65% in Hawai‘i County to 75% in Honolulu County. Among the 63 farms, 37 (59%) could not hire all the workers they needed, and 43% of respondents identified worker housing as a concern.
2. **Producers need clearer information about loan, grant, and benefit programs.** Information on available programs was the top program-access need statewide (59 out of 84, or 70%), the top need in Hawai‘i and Maui Counties, and tied for first in Honolulu County. In Kaua‘i County, eligibility information was the top reported need (5 of 6). Participation varied across counties: 7 of 9 Maui County respondents had applied for or received a state or county grant, compared with 23% of Hawai‘i County respondents.
3. **Market information is the leading marketing need, and sales channels differ by county.** Market research on demand, trends, and pricing was the top marketing need statewide (48 out of 83, or 58%). Hawai‘i County respondents sold more through farm stands (37%) and less through wholesalers (28%) than other counties; 8 of 9 Maui

County respondents sold to wholesalers or distributors; and Honolulu respondents relied on farmers markets, restaurants, and Community Supported Agriculture (CSA).

4. **Most farms keep records, but fewer than half plan with a budget.** Among the 63 farms, 48 (76%) reported tracking sales, income, or expenses, but only 27 (43%) reported creating a budget. Creating a budget was the finance topic respondents most wanted to learn (42% statewide).
5. **Few farms carry formal risk coverage, particularly in Hawai‘i County.** Only 8 out of 41 Hawai‘i County farms (20%) carried farm liability insurance, compared with 14 of 19 farms (74%) in the other three counties. Part of this gap may reflect land tenure: 86% of Hawai‘i County farms owned their land, compared with 43% elsewhere, and lease agreements often require liability coverage. Statewide, only 5 out of 60 farms (8%) carried crop or livestock insurance, and 3 (5%) used marketing or price contracts.
6. **Succession planning and secure land tenure matter most where leasing is common.** Statewide, 47 out of 84 respondents (56%) were interested in succession planning, and information on legal and estate planning was the most requested type of assistance. All 6 Kaua‘i County respondents were interested in succession planning, and 4 of 5 Kaua‘i farms leased their land. According to the 2022 Census of Agriculture, 44% to 50% of producers in each county were 65 or older, which makes succession planning a statewide concern.
7. **Interest in new crops and products is broad.** Among the 84 respondents, 58 (69%) were interested in growing new crops or products suited to Hawai‘i, including all 6 in Kaua‘i County. All 9 respondents who answered “no” were in Hawai‘i County.
8. **Farms and the organizations that support them see some needs differently.** Both groups ranked workforce concerns in nearly the same order. For program access, the order reversed: farms asked first for information about programs and eligibility, while universities, government agencies, and associations put application assistance first.

1.2 Program Priorities

Based on these results, the Agricultural Finance extension program plans to focus on practical, county-tailored support for Hawai‘i’s small, diversified farms. The program priorities are summarized below and described in detail in Section 5.

Priority	What it involves
1. Make financial support programs easier to access	Maintain a current guide to loans, grants, and tax credits with eligibility checklists, followed by optional application assistance.
2. Deliver recordkeeping and budgeting training built on templates and self-paced tools	Provide templates for recordkeeping, budgeting, and financial projections, along with online modules and hands-on sessions.

Priority	What it involves
3. Expand risk management education, starting with liability insurance in Hawai‘i County	Provide education on farm liability insurance, crop insurance options for small diversified farms, with an initial focus in Hawai‘i County
4. Help producers plan and manage labor costs	Examine labor affordability, support labor cost planning, and provide information on farmworker housing options.
5. Provide market information	Provide information on market demand, pricing, and trends to help producers identify sales opportunities and make informed marketing decisions.
6. Offer succession planning and land tenure resources	Hold estate and legal planning sessions with attorneys and provide planning templates.
7. Tailor delivery to each county and reach the smaller islands	Combine online and recorded sessions with in-person delivery through county extension offices and partners, with targeted outreach to Moloka‘i and Lāna‘i.

2. Methodology

The Assessment used a voluntary web-based survey developed by CTAHR's Agricultural Finance extension program. The survey took about 10 minutes and did not collect names or addresses. Responses were collected between September and November 2025. The survey was distributed through professional networks with assistance from colleagues.

2.1 Survey Design

The survey was designed to identify the challenges facing farmers and producers and to guide the development of the Agricultural Finance extension program. Eligible participants included farm, ranch, or farm business operations (hereafter "farms"); producer associations and cooperatives; universities and research institutions; government agencies; and other organizations involved in Hawai‘i's food system. The questionnaire used skip logic to direct respondents to questions tailored to their respondent type. The full questionnaire is available here.

The primary topics covered in the survey were:

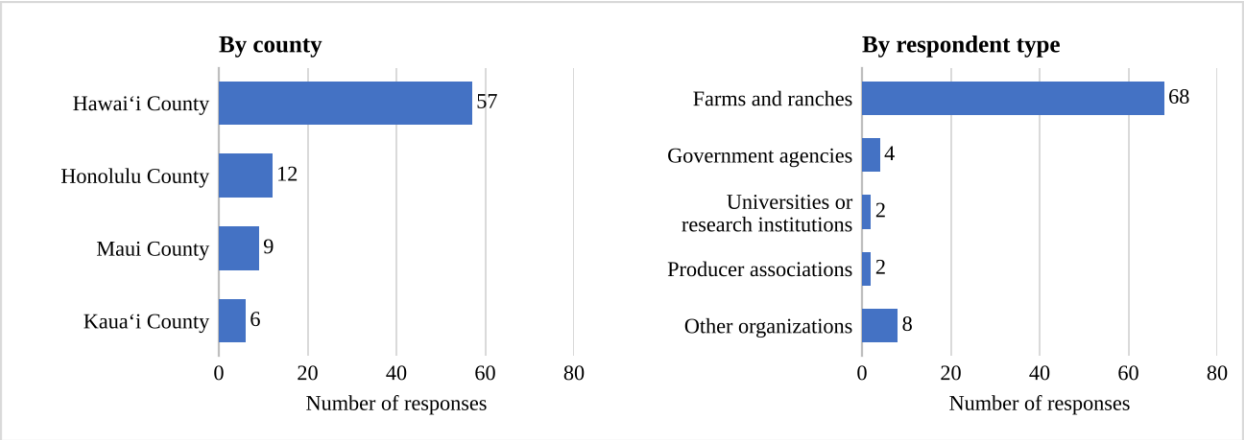

- Farm characteristics
- Financial management and business planning
- Risk management
- Labor and workforce
- Loans, grants, and benefit programs
- Farm succession
- Associations and cooperatives
- Marketing and sales
- New crops and products

IRB review and confidentiality. This study was approved by the University of Hawai‘i Human Studies Program (IRB). Participation was voluntary, and respondents could skip any question or stop at any time. To prevent identification of individual respondents, results are reported only in aggregate, and Moloka‘i and Lāna‘i responses are included within Maui County.

2.2 Survey Response Summary

The survey received 84 responses: 68 from farms, 4 from government agencies, 2 from universities or research institutions, 2 from producer associations, and 8 from other organizations. Figure 1 shows responses by county and respondent type.

Figure 1. Survey Responses by County and Respondent Type (n=84)

2.3 Analysis Approach and Limitations

Results are reported statewide and by county. Islands were grouped into counties using each farm's main island or each organization's main location. Some questions were asked only of farm and association respondents, and results for those questions are based on farm responses.

Percentages are the share of people answering a question who selected each option. For check-all-that-apply questions, they add to more than 100%. Write-in answers were assigned to an existing option when they meant the same thing.

Differences between Hawai‘i County and the other three counties combined, and between farms and organizations, were tested with Fisher's exact test. Agreement between farms and organizations on the order of priorities was measured with Spearman rank correlation. Open-ended comments were read and coded into 12 themes.

Limitations. Respondents were not randomly selected, and the survey reached about 1% of Hawai‘i's farms (Table 1). Since Hawai‘i County accounts for 68% of responses, statewide results mostly reflect Hawai‘i County. With fewer than 10 responses each in Maui and Kaua‘i counties, a single answer can change their percentages substantially.

3. Findings by County

According to the 2022 Census of Agriculture[1], Hawai‘i’s 6,569 farms operated on 1,053,302 acres and sold $673.8 million in agricultural products. Most farms (64%) operated on fewer than 10 acres. Table 1 compares the four counties and survey coverage in each, and Table 2 shows the top need in each topic by county.

Table 1. County Agricultural Characteristics (2022 Census of Agriculture) and Survey Coverage

County	Farms (% of statewide total)	Land in farms (acres)	Avg. size (acres)	Farms 1-9 acres	Sales	Survey farms (% of county farms)
Hawai‘i	3,638 (55.4%)	604,184	166	61%	$290.3M	45 (1.2%)
Honolulu	1,002 (15.3%)	60,254	60	74%	$192.8M	8 (0.8%)
Maui	1,405 (21.4%)	258,218	184	68%	$93.9M	9 (0.6%)
Kaua‘i	524 (8%)	130,646	249	62%	$96.7M	6 (1.1%)
Statewide	**6,569**	**1,053,302**	**160**	**64%**	**$673.8M**	**68 (1.0%)**

Note: Sales are the market value of agricultural products sold.

Table 2. Top Need or Concern in Each Topic by County

Topic	Statewide	Hawai‘i County	Honolulu County	Maui County	Kaua‘i County
Financial management	Create a budget (42%)	Create a budget; Track sales, income or expenses (42%)	Create a budget (5 of 12)	Accounting software (4 of 9)	Create a budget (4 of 6)
Business planning	Templates and sample plans (45%)	Templates and sample plans (46%)	Help with financial projections and budgets; Feedback on a draft of my business plan (5 of 12)	Online self-paced resources (4 of 9)	Templates and sample plans (5 of 6)
Risk management	Farm liability insurance; Sales channel diversification (39%)	Farm liability insurance (46%)	Crop or livestock insurance; Emergency or disaster plan (6 of 8)	Sales channel diversification; Crop or livestock insurance; Marketing or price contracts; Emergency or disaster plan; Savings or emergency fund (2 of 9)	Sales channel diversification (2 of 4)
Labor and workforce	High labor costs (67%)	High labor costs (65%)	High labor costs (9 of 12)	High labor costs (6 of 9)	High labor costs (4 of 6)

Topic	Statewide	Hawai‘i County	Honolulu County	Maui County	Kaua‘i County
Loans, grants, and benefit programs	Information on available programs (70%)	Information on available programs (68%)	Information on available programs; Application assistance (8 of 12)	Information on available programs (8 of 9)	Eligibility information (5 of 6)
Farm succession	Legal and estate planning information (56%)	Legal and estate planning information (60%)	Legal and estate planning information; Information on financial planning and taxes (5 of 12)	Templates and planning tools (6 of 9)	Templates and planning tools (5 of 6)
Associations and cooperatives: Services	Bulk purchase of inputs (58%)	Selling or marketing products (60%)	Bulk purchase of inputs; Shared processing, packaging or storage (7 of 11)	Representation or advocacy (8 of 9)	Bulk purchase of inputs; Selling or marketing products; Representation or advocacy; Shared equipment (3 of 6)
Associations and cooperatives: Support needs	Help with regulations and permits (56%)	Help with regulations and permits (60%)	Help with regulations and permits; Marketing and branding (6 of 12)	Business planning; Start-up assistance (4 of 9)	Marketing and branding (5 of 6)
Marketing and sales	Market research (58%)	Market research (59%)	Market research (7 of 12)	Market research (5 of 9)	Social media marketing (5 of 6)

Note: Ties are listed together. Values in parentheses are percentages for statewide and Hawai‘i County and counts for the other counties.

3.1 Hawai‘i County

According to the 2022 Census of Agriculture, Hawai‘i County (Hawai‘i Island) led the state in number of farms (3,638, or 55% of the state total), land in farms (604,184 acres), and agricultural sales ($290.3 million). Coffee was the largest reported crop by acreage, and 39% of county sales came from livestock, poultry, and their products.

In this survey, 57 of the 84 responses came from Hawai‘i County: 45 from farms, 3 from government agencies, 1 from a university, 2 from producer associations, and 6 from other organizations. Surveyed farms were mostly owner-operated orchard operations: 76% grew fruit or nut trees and 86% owned their land. Many were newer operations, with 43% farming five years or less. The needs and concerns Hawai‘i County respondents identified most often were:

- Information on available loan, grant, and benefit programs (68%)
- High labor costs (65%)
- Legal and estate planning information for succession (60%)
- Help for associations with regulations and permits (60%)

- Market research on demand, trends, and pricing (59%)

Respondents also wanted shared processing, packaging, and storage facilities (55%), and 31% of farms reported that their industry had no association.

Compared with farms in the other three counties combined, Hawai‘i County farms were less likely to carry farm liability insurance (20% against 74%) or workers’ compensation insurance (5% against 37%), and less likely to have received a state or county grant (10% against 52%). They sold their products more through farm stands and less through wholesalers, and more of them did not need hired workers (29% against 5%). Among respondents, concern about workers not showing up or leaving the job was higher (37% against 15%).

Program opportunities in Hawai‘i County

- Liability insurance and risk management workshops: 52% of Hawai‘i County farms wanted to learn about farm liability insurance, compared with 13% of farms elsewhere.
- Outreach on state and county grant programs, which only 10% of Hawai‘i County farms had used (compared with 52% elsewhere).
- Market and pricing information for farms that sell directly through farm stands and farmers markets.

3.2 Honolulu County

According to the 2022 Census of Agriculture, Honolulu County (O‘ahu) had 1,002 farms on 60,254 acres. Farms in the county had the lowest average acreage (60 acres; 74% under 10 acres) but the highest average sales per farm at about $192,000. Crops accounted for 87% of agricultural sales.

In this survey, 12 responses came from Honolulu County: 8 from farms, 1 from a university, 1 from a government agency, and 2 from other organizations. Of the 8 farms that participated, 5 grew flowers or plants, 4 operated on 1-4 acres, and 2 had been farming for less than a year. The most frequently reported needs and concerns among Honolulu respondents were:

- High labor costs (9 of 12)
- Information on available programs and help with applications (8 of 12 each)
- Market research, finding qualified workers, and workforce training (7 of 12 each)
- Bulk purchasing and shared processing through associations (7 of 11 each)

Honolulu respondents showed the broadest interest in learning about risk management: 6 of 8 selected crop or livestock insurance, 6 of 8 emergency or disaster planning, and 5 of 8 food safety plans. They sold through farmers markets (7 of 12), restaurants (6), and CSAs (6), and 6 of 12 wanted help setting up online sales. Honolulu farms showed less interest in planning support than farms in other counties: 4 of 8 were not interested in succession planning, and 5 of 8 said they needed no help with business planning.

Program opportunities in Honolulu

- Crop insurance and disaster planning information.
- Market and pricing information for farms that sell through restaurants, CSAs, and online channels.

3.3 Maui County

According to the 2022 Census of Agriculture, Maui County (Maui, Molokaʻi, and Lānaʻi) had 1,405 farms on 258,218 acres. Farms in the county averaged 184 acres, and 68% operated on fewer than 10 acres. Agricultural sales totaled $93.9 million, and crops accounted for 94% of sales.

In this survey, all 9 responses from Maui County came from farms: 7 on Maui, 1 on Molokaʻi, and 1 on Lānaʻi. To protect confidentiality, Molokaʻi and Lānaʻi responses are reported only as part of Maui County. Of the 8 farms that described their operations, 4 had been farming for 30 years or more, and 4 leased their land. Family members worked on all 8 farms, and 5 used part-time workers. The needs and concerns Maui County respondents reported most often were:

- Information on available programs (8 of 9)
- Representation and advocacy from associations (8 of 9)
- High labor costs, eligibility information, and succession planning templates (6 of 9 each)
- Worker housing and market research (5 of 9 each)

Maui County respondents were the most active users of programs: 7 of 9 had applied for or received state or county grants, and 3 of 9 each had used United States Department of Agriculture (USDA) loans, disaster relief payments, or farm insurance. 8 of 9 sold to wholesalers or distributors. Most farms tracked finances (7 of 8) and used accounting software (6 of 8), but only 1 of 8 created a budget, and 6 of 8 could not hire all the workers they needed. Comments raised inter-island shipping costs, fair access to funding for smaller islands, locally produced animal feed, and remote training.

Program opportunities in Maui County

- Budgeting support that builds on farms' existing recordkeeping and software use.
- Worker housing information and labor planning.
- Online or remote programs that reach Molokaʻi and Lānaʻi.

3.4 Kauaʻi County

According to the 2022 Census of Agriculture, Kauaʻi County had 524 farms on 130,646 acres. Farms in the county had the largest average size of any county (249 acres), and 62% operated on fewer than 10 acres. Agricultural sales totaled $96.7 million, and crops accounted for 82% of sales. Taro was among the leading crops by acreage.

In this survey, all 6 responses from Kauaʻi County came from farms. Of the 5 farms that described their operations, 4 leased their land, the highest share of any county. All 5 carried farm liability insurance, and 4 diversified their sales channels to manage risk. Four of the 5 farms could not hire all the workers they needed.

The needs and concerns Kauaʻi County respondents reported most often were:

- Eligibility information for programs (5 of 6)
- Business plan templates and succession planning templates (5 of 6 each)
- Marketing and branding support for associations and social media marketing (5 of 6 each)
- Learning to create a budget, step-by-step business planning training, and high labor costs (4 of 6 each)

All 6 Kauaʻi County respondents were interested in succession planning and in growing new crops. 3 of the 6 wanted family communication and mediation resources for succession, and 3 wanted support for trade shows. Comments asked for secure, long-term land tenancy, a pool of trained day workers, and one-on-one help building a business plan.

Program opportunities in Kauaʻi County

- Business planning and budgeting training with templates and coaching.
- Succession planning resources, including guidance for farms on leased land.

4. Findings by Topic

This section reports results for ten topics. Each subsection summarizes statewide results and notes key differences among counties. Figures show results by county, and detailed county results appear in Section 3 and Appendix A. Program priorities based on these findings are described in Section 5.

4.1 Financial Management and Business Planning

Most farms kept financial records, but fewer planned ahead. Of 63 farms, 76% tracked sales, income, or expenses and 48% used accounting software, but only 43% created a budget and 19% hired an accountant or bookkeeper; 6% did not track finances at all. Hawai‘i County farms were less likely than farms in the other counties to hire an accountant or bookkeeper (10% against 38%). Creating a budget was the most requested finance topic (42% of all respondents), followed by accounting software (39%) and tracking sales and expenses (36%). Write-in answers asked for help with taxes, cash flow, land purchase options, and grants.

For business planning, 38% of farms said they needed no help. Among all respondents, the most requested supports were templates and sample plans (45%), help with financial projections and budgets (39%), and step-by-step training and feedback on a draft plan (33% each).

> *“I’d love a 1:1 assistance to create and build a new business model/plan.”*
> — Farm, Kaua‘i County

Figure 2. Finance Topics Respondents Want to Learn, by County (n=84)

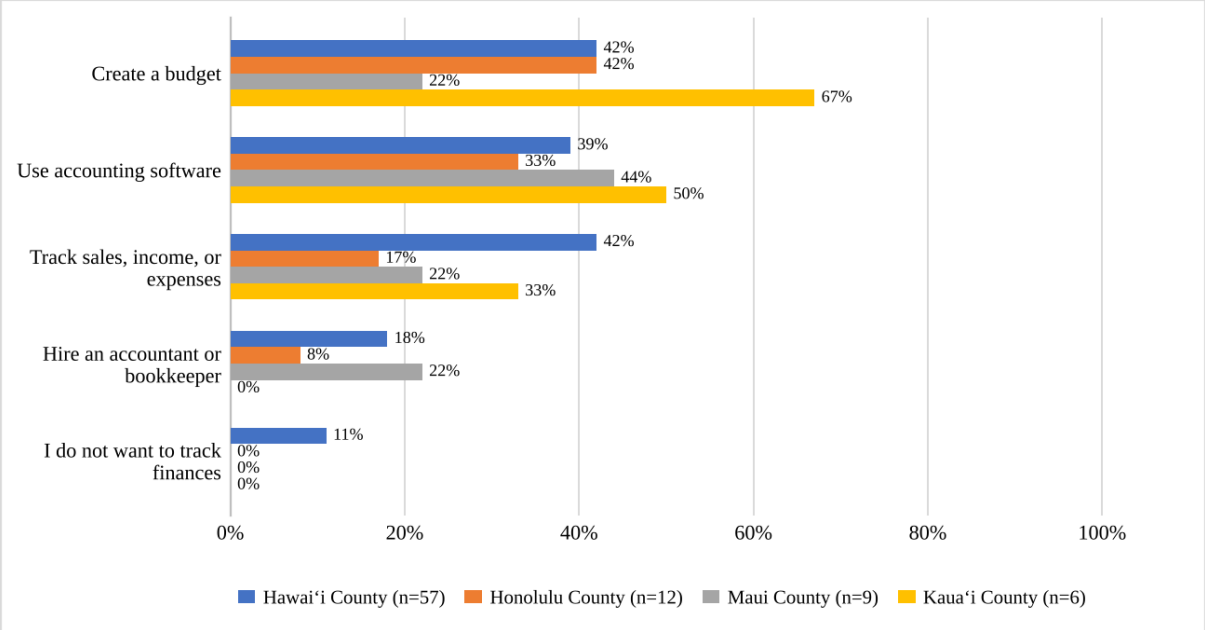

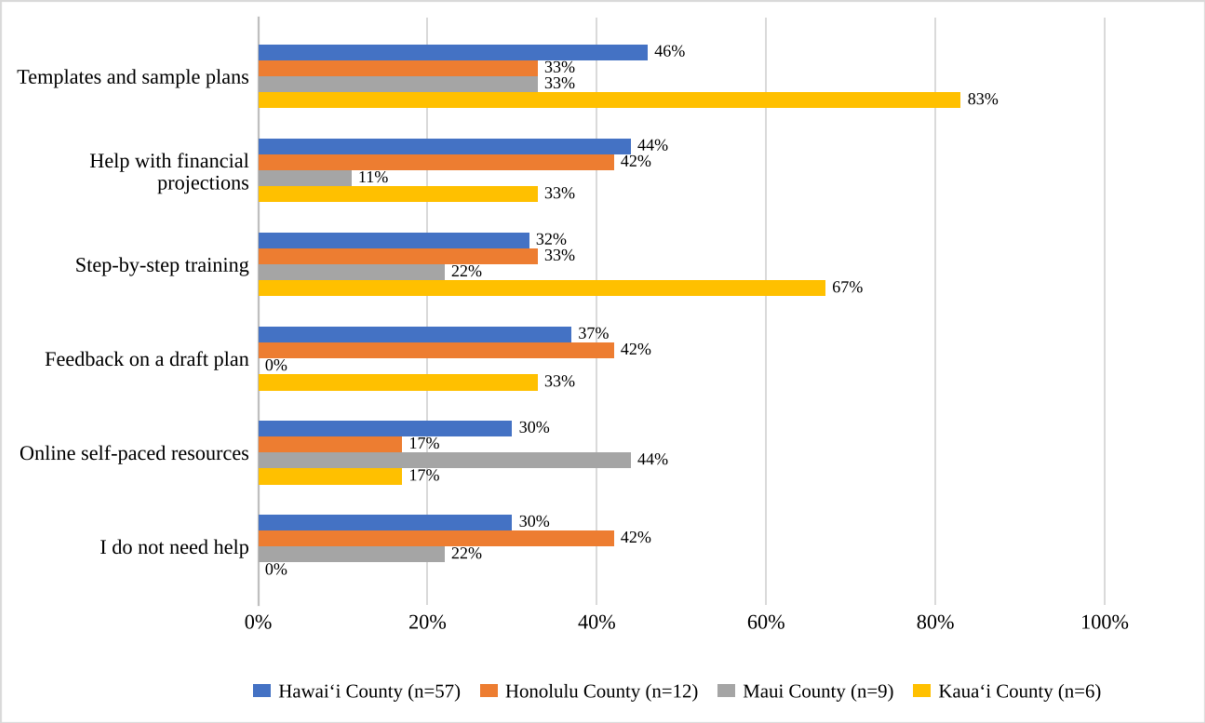

Figure 3. Support Needed to Develop a Business Plan, by County (n=84)

4.2 Risk Management

Farms managed risk mainly through general insurance, savings, and outside income rather than farm-specific tools. Of 60 farms, 58% carried property insurance, 58% kept savings or an emergency fund, 57% had health insurance, and 53% relied on off-farm income. Only 37% carried farm liability insurance, 12% had an emergency or disaster plan, 8% carried crop or livestock insurance, and 5% used marketing or price contracts. Hawai‘i County farms were much less likely than farms in the other three counties to carry farm liability insurance (20% against 74%) or workers’ compensation insurance (5% against 37%).

The risk topics respondents most wanted to learn about were farm liability insurance and sales channel diversification (39% each), crop or livestock insurance (38%), and contracts (36%). Risks raised in comments included drought, months without water, hurricanes, vog damage, and agricultural theft.

> *“Hurricanes, wind storms, drought and flooding are concerns - how do we cover those in specialty crops”*
>
> — Farm, Maui County

Figure 4. Current Risk Management Practices of Farms, by County (n=60)

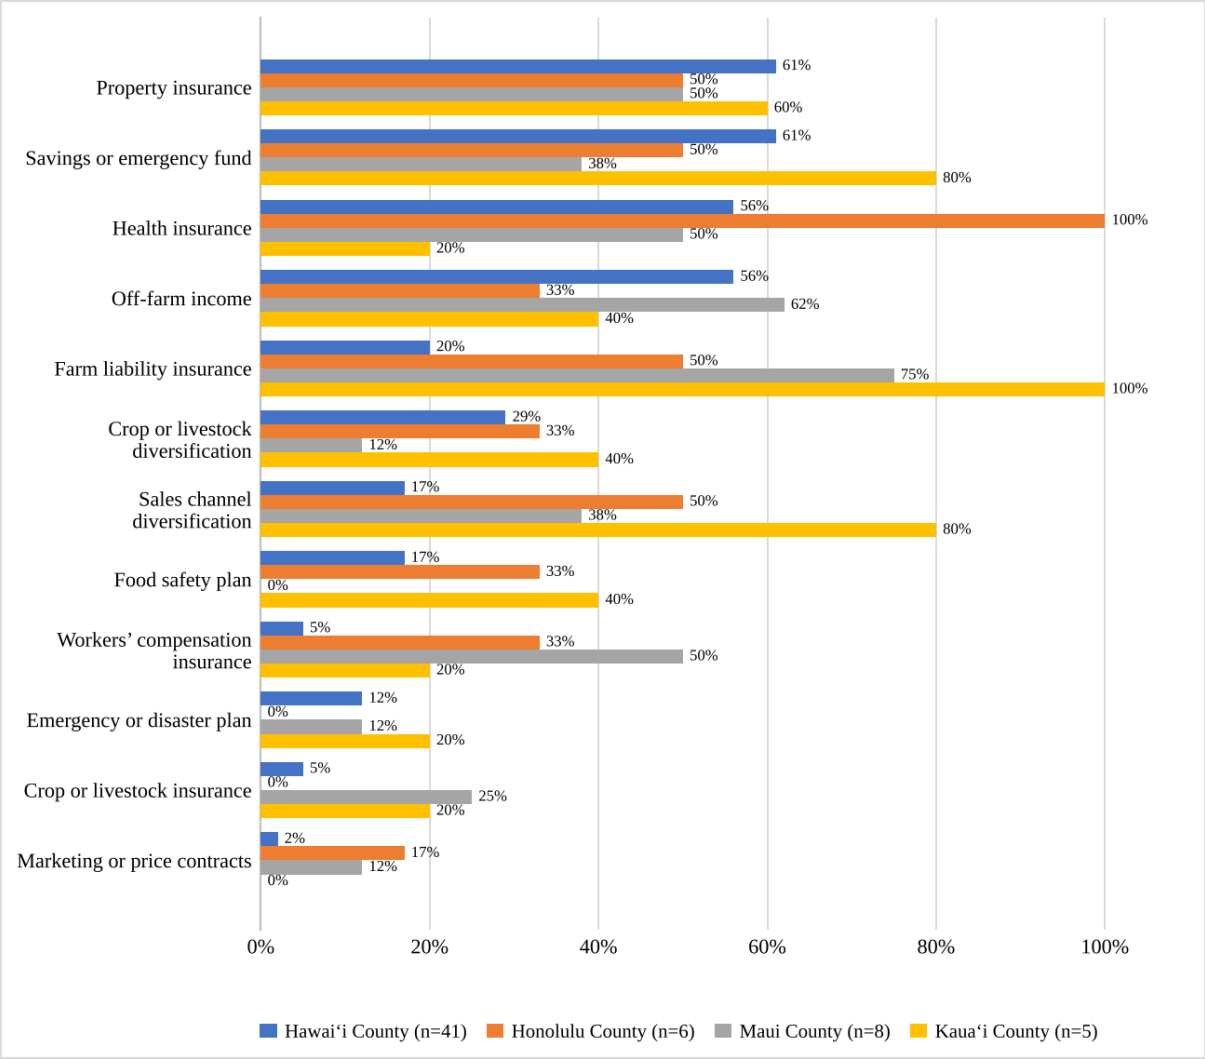

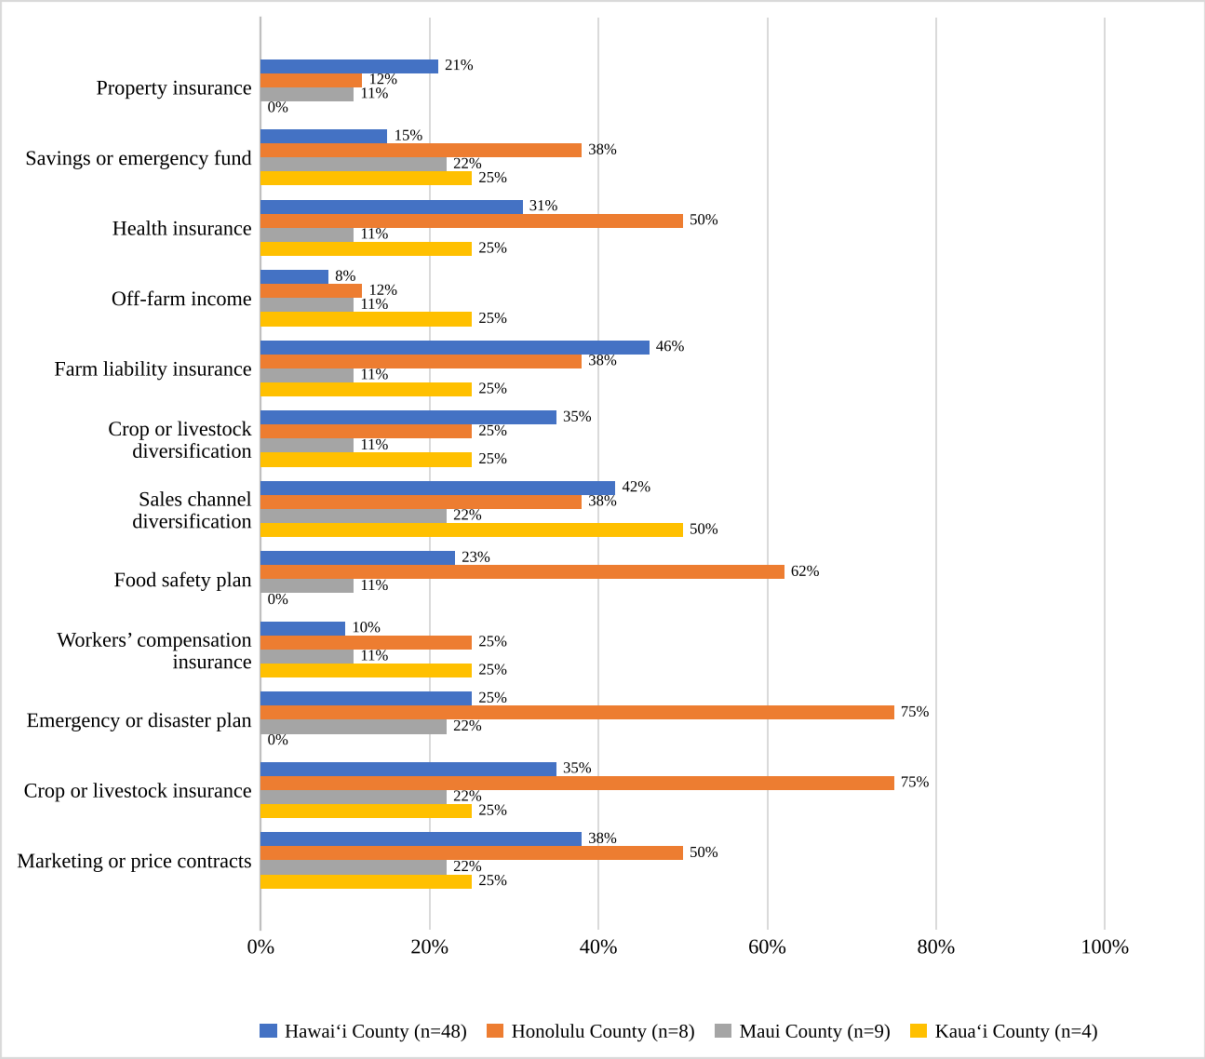

Figure 5. Risk Management Topics Respondents Want to Learn, by County (n=69)

4.3 Labor and Workforce

Of the 63 farms, 37 (59%) could not hire all the workers they needed; 21% could, and 21% did not need workers. Work was done mainly by owners (89%) and family members (73%); 21% used part-time workers and 13% full-time workers. Among all respondents, the leading workforce concerns were high labor costs (67%), finding qualified workers (50%), worker housing (43%), and training and skill development (37%). Comments tied labor costs to Hawai'i's cost of living and suggested shared pools of trained workers.

> *"hard to afford paying workers wages that allow them to afford the cost of living here. workers often opt for tourism, construction, military for higher pay."*
> — Producer association, Hawai'i County

Figure 6. Ability to Hire All Workers Needed, Farms by County (n=63)

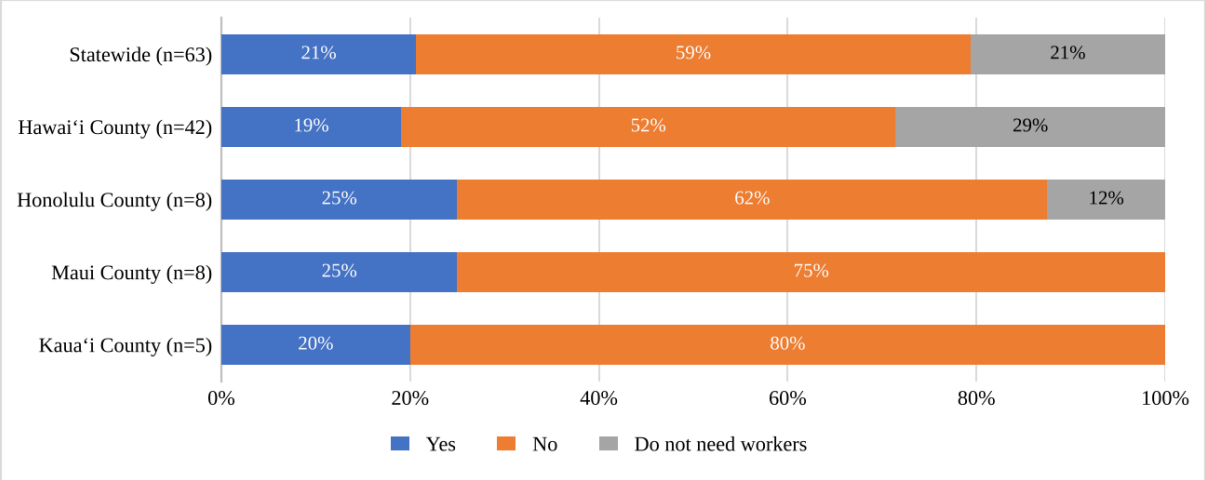

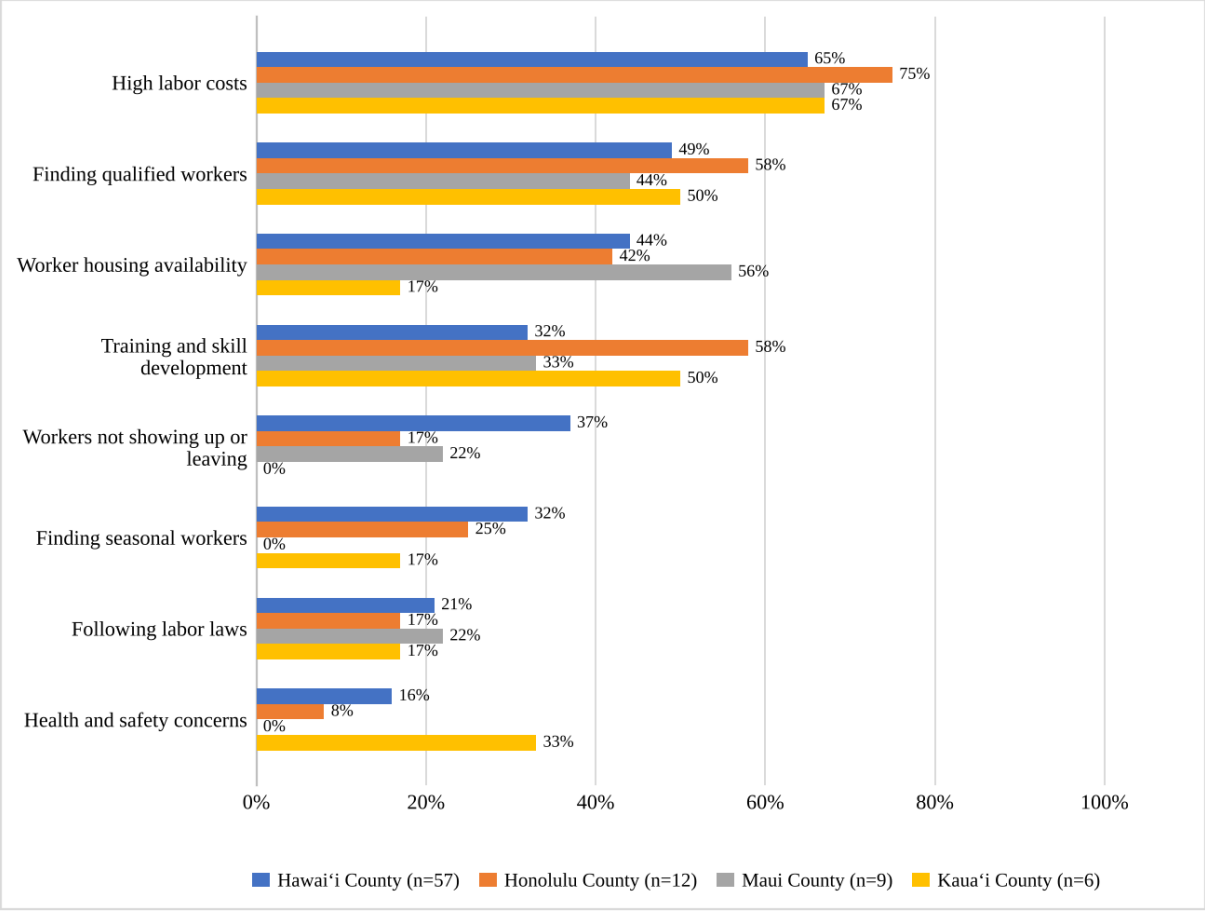

Figure 7. Workforce Concerns by County (n=84)

4.4 Access to Loans, Grants, and Benefit Programs

In the past five years, 37% of farms applied for or received a USDA grant and 24% a state or county grant. Fewer used tax credits or exemptions (19%), private lender loans (14%), private or

nonprofit grants (11%), USDA loans (10%), disaster relief (10%), or farm insurance (8%), and 29% reported none. Use of state and county grants was much lower among Hawai‘i County farms (10%) than among farms in the other three counties (52%). The most needed support was information on available programs (70% of all respondents), followed by help with the application process (54%) and eligibility information (52%); 18% needed no assistance.

> *“I’m interested in getting grants and subsidies but don’t know the first thing about it.”*
>
> — Farm, Hawai‘i County

Figure 8. Programs Applied for or Received in the Past Five Years, by County (n=83)

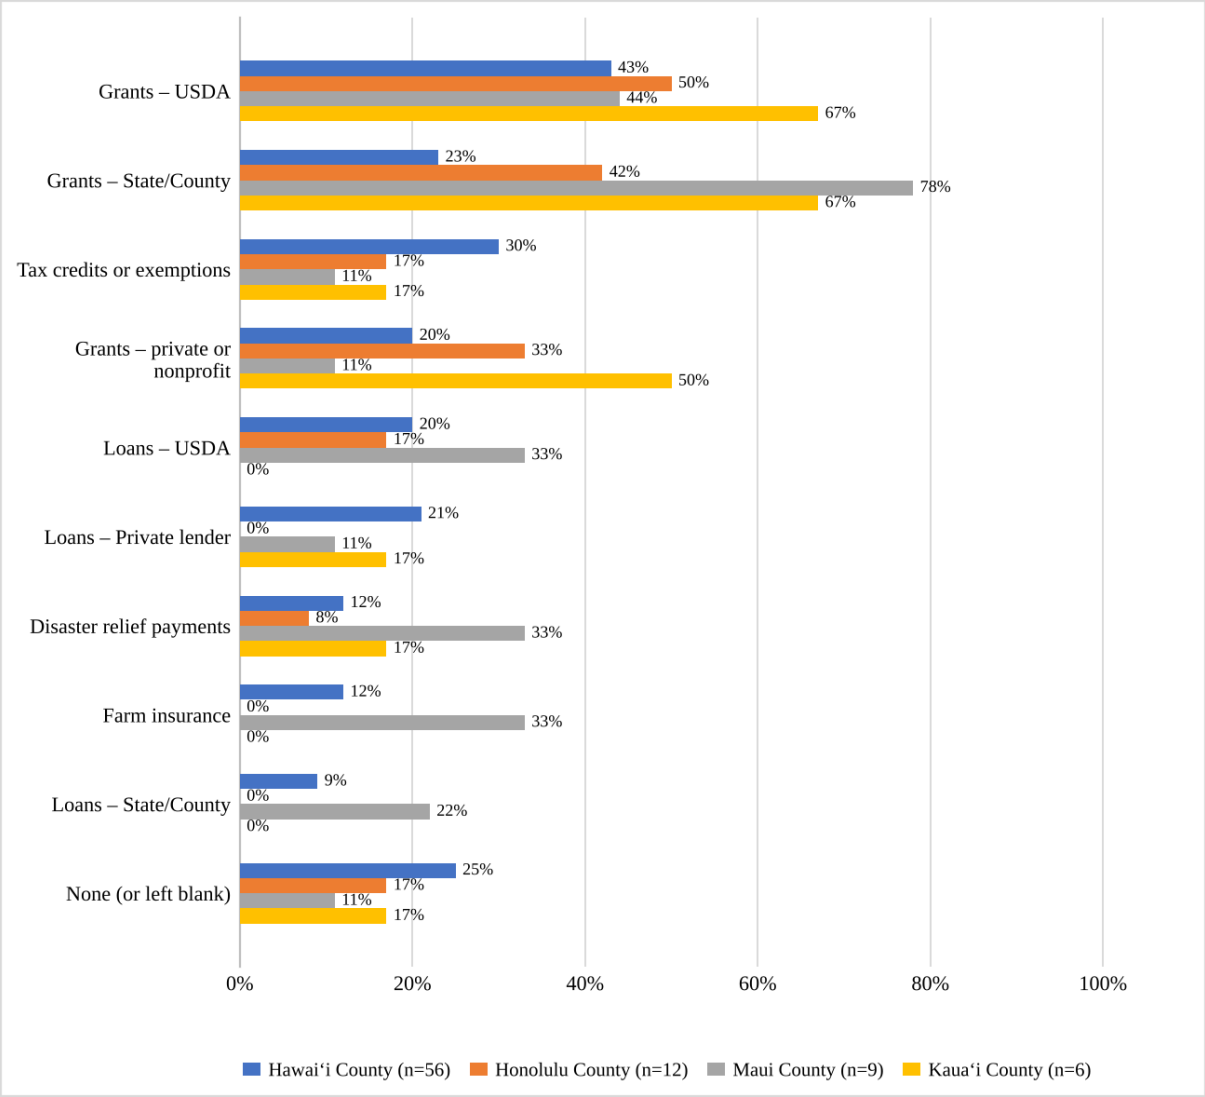

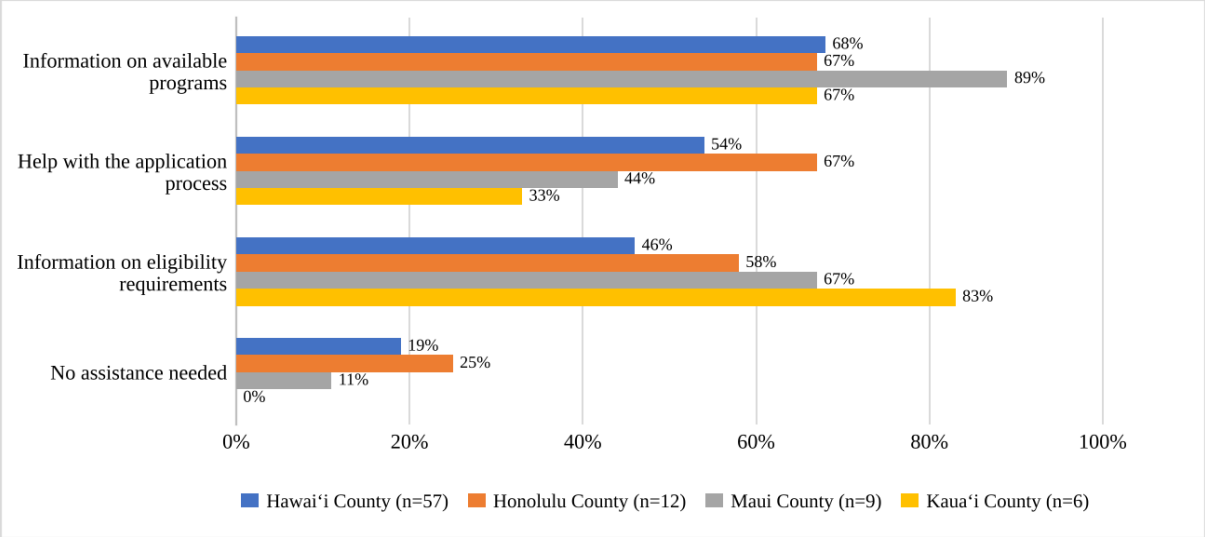

Figure 9. Support Needed to Access Loans, Grants, and Benefit Programs, by County (n=84)

4.5 Farm Succession

Forty-seven out of 84 respondents (56%) were interested in succession planning, including 49% of farms; 27% were unsure and 17% were not interested. Interest was highest in Kaua‘i County, where all 6 respondents were interested. The most needed assistance was information on legal and estate planning (56%), followed by templates and planning tools (44%), financial planning and tax information (38%), and help connecting land with new farmers (29%). In every county, 44% to 50% of producers counted in the 2022 Census of Agriculture were 65 or older.

Figure 10. Interest in Farm Succession Planning, by County (n=84)

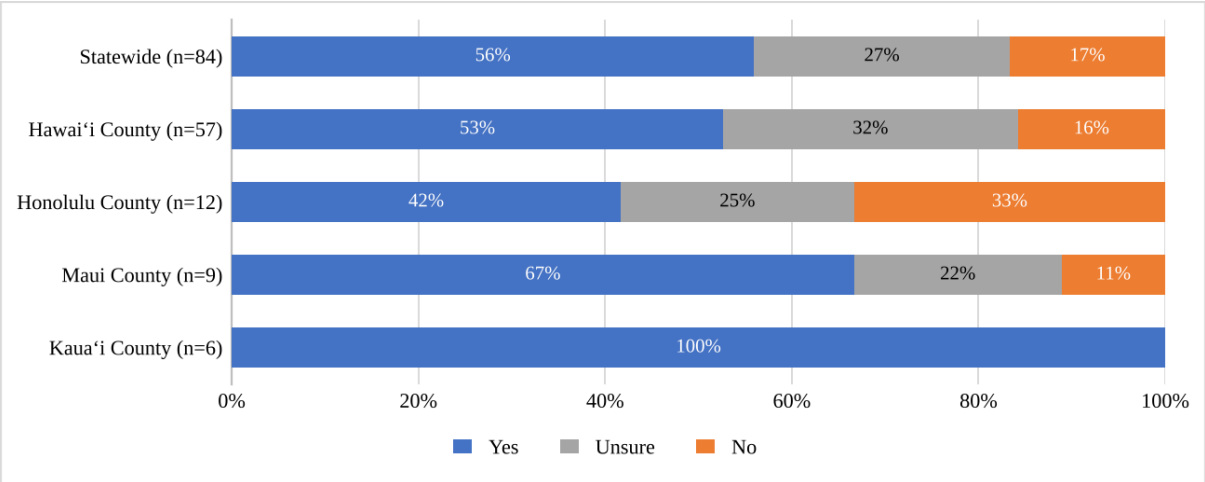

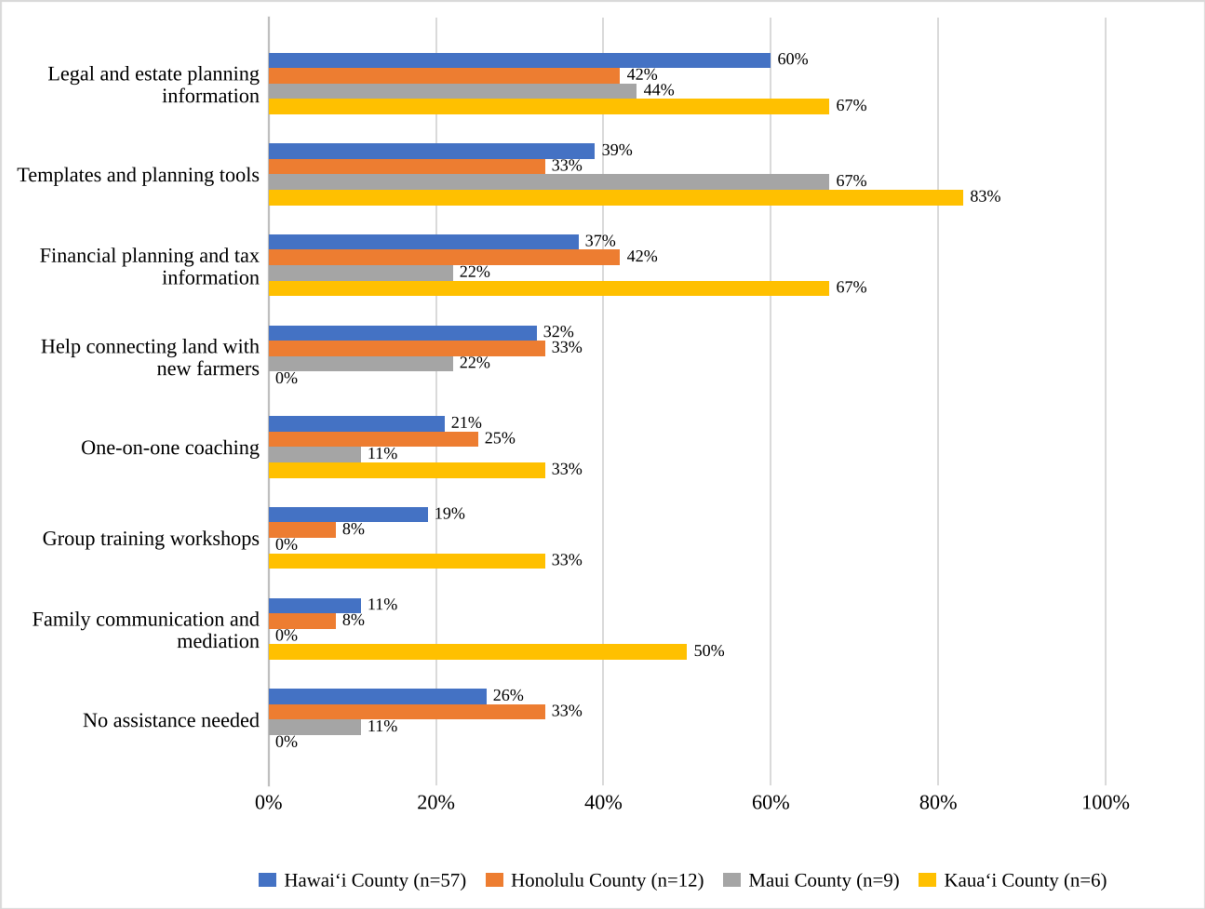

Figure 11. Assistance Needed for Farm Succession Planning, by County (n=84)

4.6 Associations and Cooperatives

Of 63 farms, 54% belonged to an association or cooperative in their industry, 19% had one but were not members, and 27% said their industry had none. Membership was higher in Maui (6 of 8 farms) and Kaua‘i (4 of 5) counties than in Hawai‘i County (48%), where 31% of farms reported that their industry had no association. Respondents most wanted associations to provide bulk purchasing of inputs (58%), selling or marketing (57%), representation and advocacy (57%), and shared processing, packaging, or storage (51%). To help associations succeed, the top needs were help with regulations and permits (56%), cost-sharing programs (48%), and marketing and branding (43%). These findings may also inform partners that work with producer associations and cooperatives.

> *“Cooperative space where farmers can wash, pack, store (dry, cold, freeze) and process farm products.”*
>
> — Farm, Hawai‘i County

Figure 12. Industry Association or Cooperative Membership, Farms by County (n=63)

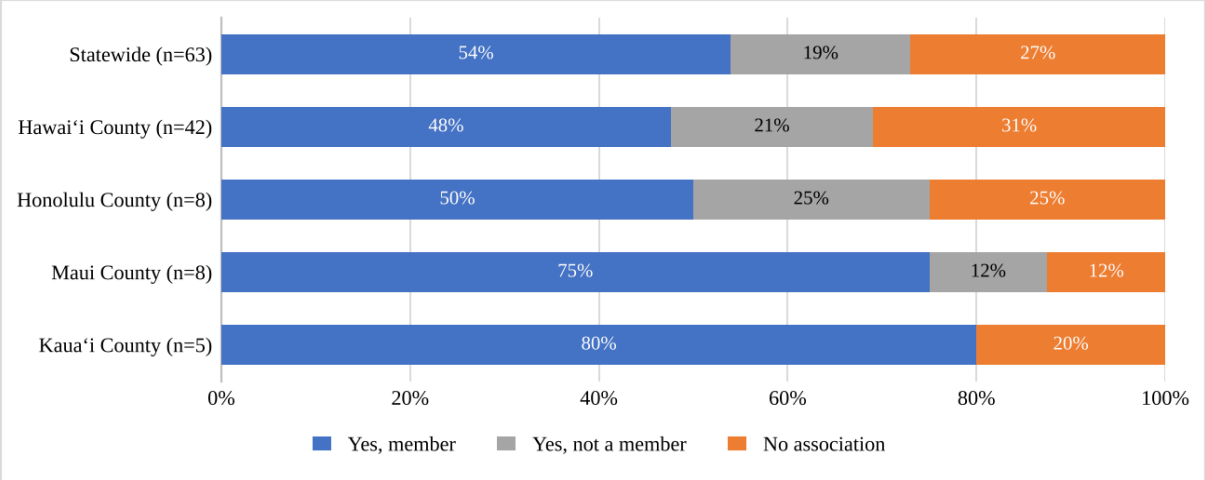

Figure 13. Services Needed from Associations or Cooperatives, by County (n=79)

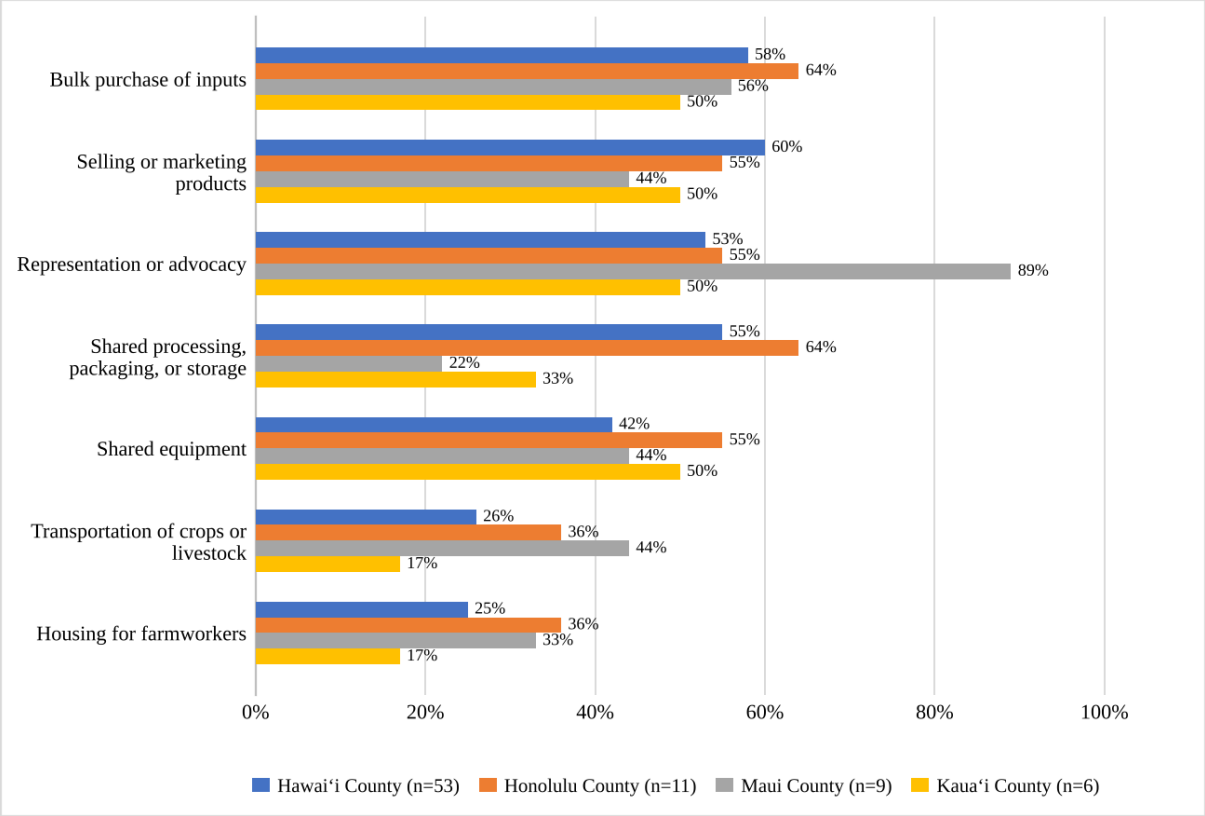

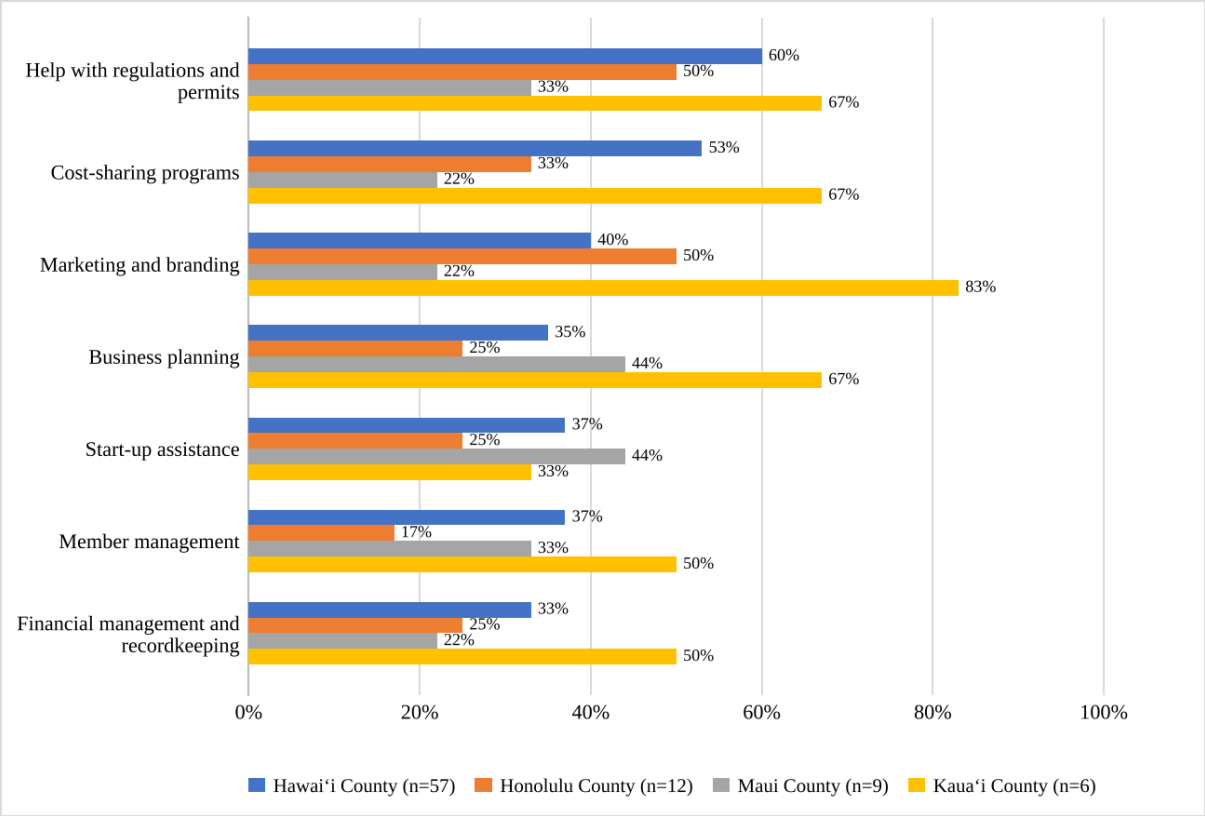

Figure 14. Support Needed for Associations or Cooperatives to Succeed, by County (n=84)

4.7 Marketing and Sales Channels

Farms sold mainly through farmers markets (40%), wholesalers or distributors (33%), and online (33%), followed by farm stands (22%), restaurants (21%), and grocery stores (21%). Only 1 farm sold to institutions such as schools or military bases. Sales channels also differed by county: Hawai‘i County respondents sold more through farm stands (37%) and less through wholesalers (28%) than respondents in other counties, while 8 of 9 Maui County respondents sold to wholesalers or distributors. The top marketing need was market research on demand, trends, and pricing (58%), followed by marketing plan development (41%), social media marketing (40%), and branding and packaging advice (37%). Comments called for state “buy local” campaigns and more local food in schools.

> *“How do we convince the locals to spend more on locally produced food? Until that is solved, we are doomed to be losing money in agriculture and not sustainable.”*

Figure 15. Where Respondents Sell Products, by County (n=84)

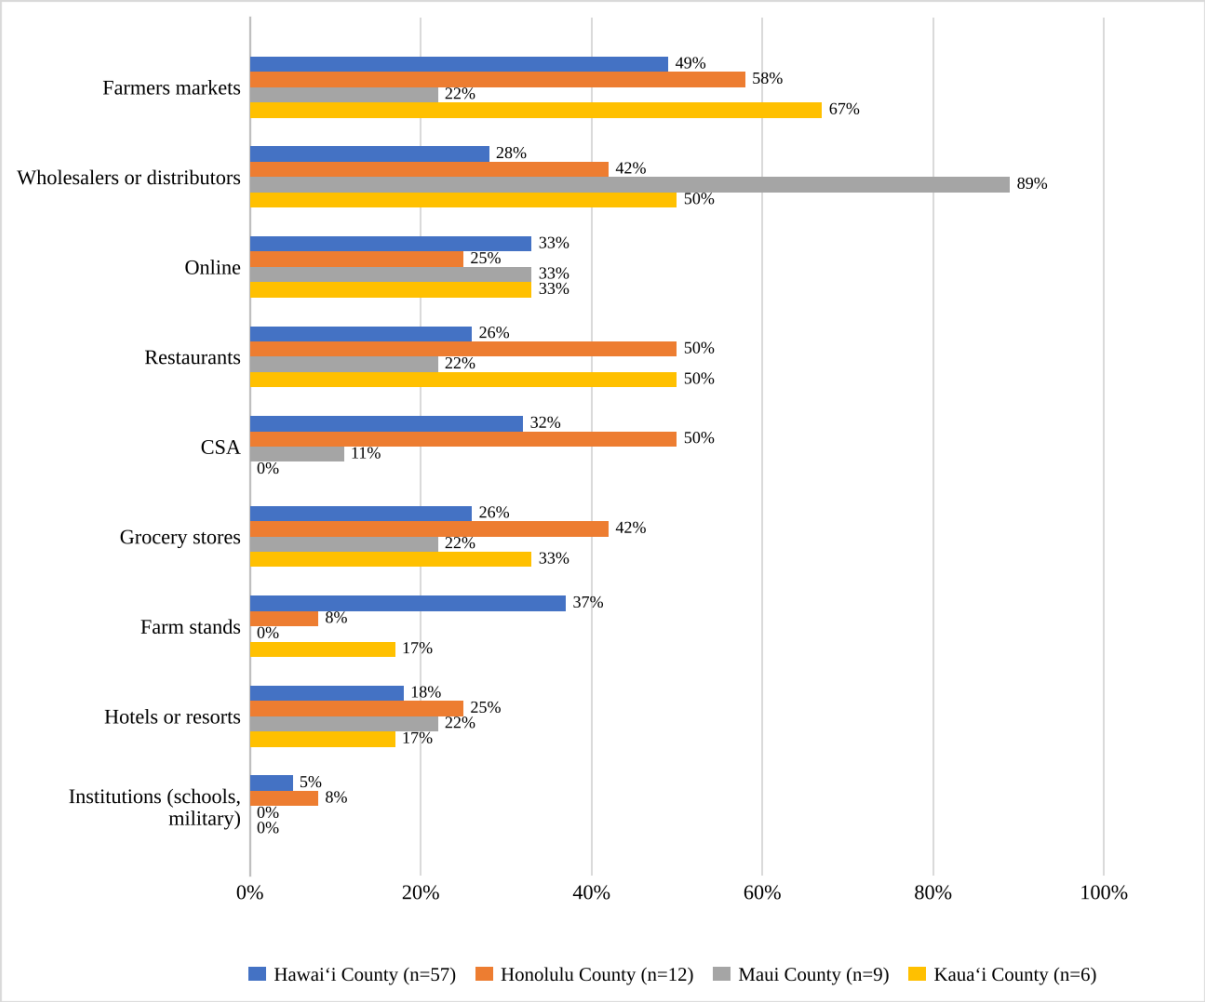

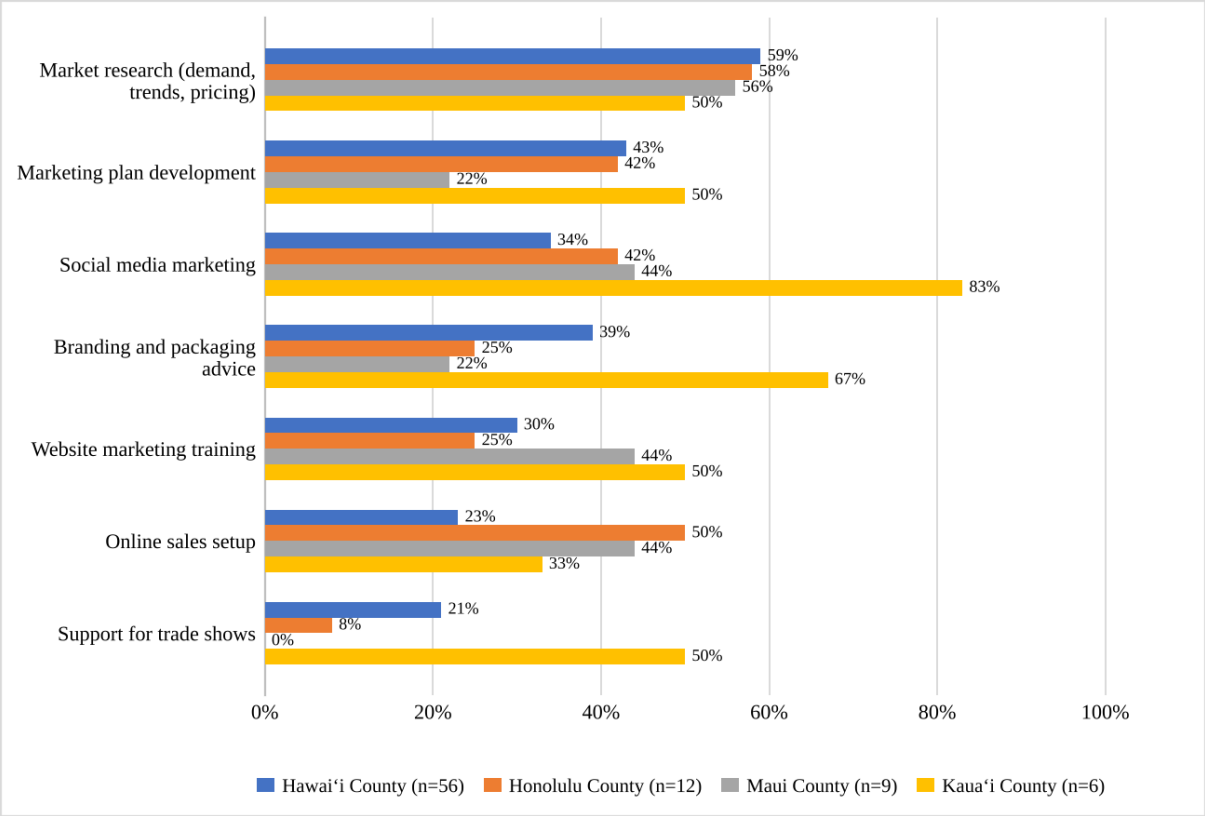

Figure 16. Support Needed to Improve Marketing, by County (n=83)

4.8 New Crops and Products

Fifty-eight out of 84 respondents (69%) were interested in growing new crops or products suited to Hawai‘i, including 71% of farms. All 6 Kaua‘i County respondents were interested, and all 9 respondents who were not interested were in Hawai‘i County. Organizations were asked whether producers needed to explore new crops; their answers were more mixed. Suggestions ranged from fruit, nut, and tree crops to imported vegetables that could be grown locally (Table 3).

Figure 17. Interest in Growing New Crops or Products, by County (n=84)

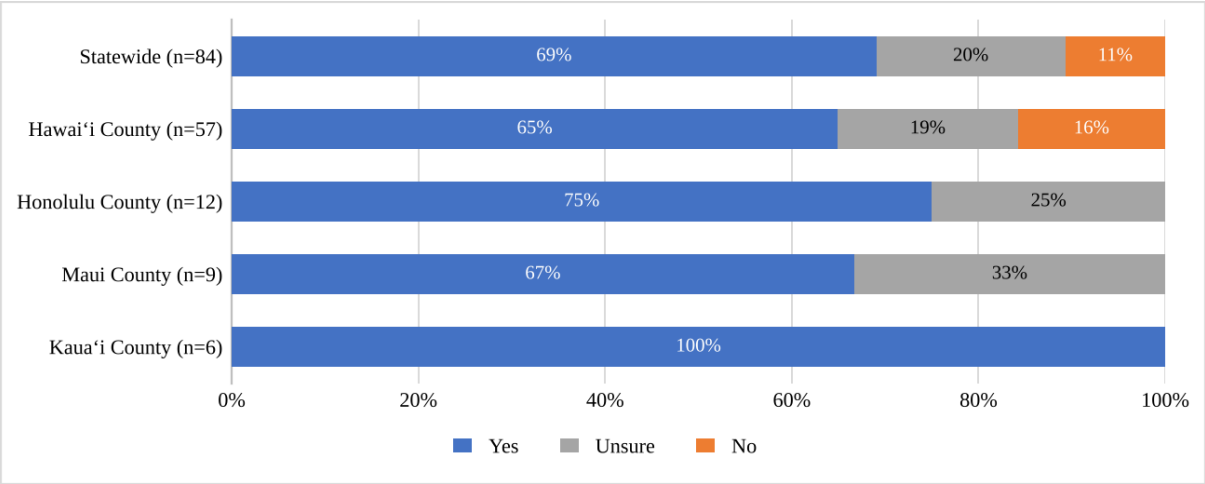

Table 3. Suggested New Crops and Products

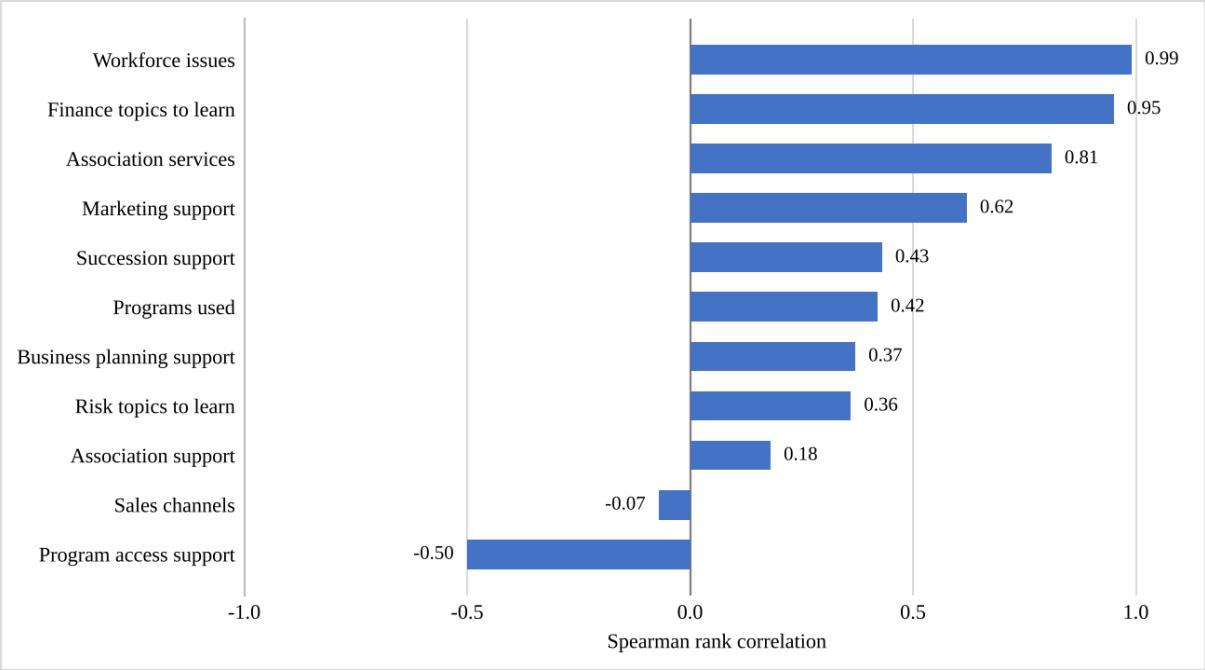

Category	Mentions	Examples from responses
Fruit, nut, and tree crops	10	Olives, low-chill stone fruit, cashews, kiwi, white pineapple, citrus, exotic fruit
Vegetables	7	Garlic, artichokes, broccoli, tomatoes, bell peppers, katuk
Hemp, cannabis, and kratom	4	Industrial hemp, hemp seed, greenhouse cannabis
Medicinal, herbal, and traditional Hawaiian crops	3	‘Ulu, kalo, ‘uala, māmaki, lā‘au lapa‘au, medicinal herbs
Climate- or pest-resilient crops	3	Heat-tolerant crops, pest-resistant varieties, wildfire green barriers
Animal feed and forage	2	Locally grown grass and feed, tree nuts for feed
Flowers, lei, and new cultivars	2	Lei flowers, new floriculture cultivars
Aquaculture	1	New aquaculture species
Mushrooms	1	Food and medicinal mushrooms

4.9 Farm and Organization Perspectives

Farms and the organizations that serve them agreed on some priorities and diverged on others. Figure 18 compares the order in which farms (68) and universities, government agencies, and associations combined (8) ranked the options in each topic.[2] Because organizations answered for producers in general and selected more options, the comparison focuses on the order of priorities rather than percentages.

[22]Spearman rank correlation compares the order of options between two groups, from −1 (opposite order) to 1 (same order).

Figure 18. Agreement Between Farms and Organizations on the Order of Needs (Spearman rank correlation)

Workforce concerns matched almost exactly (0.99), and finance learning needs (0.95) and marketing needs (0.62) largely agreed. Program access reversed (−0.50), as Table 4 shows. Organizations also emphasized connecting land with new farmers (5 of 8 against 22% of farms) and family mediation for succession (4 of 8 against 7%), and described a more commercial set of sales channels than farms reported.

Table 4. Program Access Needs: Farms and Organizations That Wanted Help

Support needed	Farms (n=53)	Organizations (n=8)
Information on available programs	91% (48)	5 of 8
Information on eligibility requirements	74% (39)	3 of 8
Assistance with application process	60% (32)	8 of 8

Programs designed from service providers' assumptions may miss what producers say they need first. One respondent made the point directly, recommending that farmers be surveyed before policies are written "rather than relying on assumptions from people without boots-on-the-ground experience."

4.10 What Respondents Said

Forty-two respondents wrote open-ended comments, which were coded into 12 themes (Table 5). Labor, marketing and local demand, and access to capital came up most often. A comment could touch more than one theme.

Table 5. Comment Themes by County (number of respondents raising each theme)

Theme	Statewide	Hawai‘i County	Honolulu County	Maui County	Kaua‘i County
Respondents who commented	42	28	6	5	3
Labor supply, wages, and housing	17	10	2	3	2
Marketing, buyers, and local demand	15	11	2	1	1
Grants, loans, and capital	14	7	3	3	1
Extension, technical help, and research	10	8	2	0	0
Land access, tenure, and cost	9	6	2	0	1
Training, networking, and peer learning	8	5	0	2	1
Taxes, recordkeeping, and accounting	7	5	1	0	1
Pests, weeds, water, and weather	7	4	1	1	1
Processing, facilities, and fencing	6	5	1	0	0
Regulation, permits, and zoning	5	4	1	0	0
Shipping and operating costs	5	3	1	1	0
Insurance and legal	5	2	1	1	1

Comments in Hawai‘i County focused on marketing and local demand, labor, and extension services, including requests for more staff on the neighbor islands and faster responses. Maui County comments raised funding and shipping costs for smaller islands, labor, and remote training. Honolulu comments emphasized funding, land and water access, and organic certification recordkeeping. Kaua‘i comments called for secure land tenure and pools of trained workers.

5. Program Priorities

The survey shows a clear need for practical, ongoing support for Hawai‘i’s agricultural producers. Four conditions shape the program priorities that follow:

- Most farms are small, family-operated businesses with little time for paperwork and planning.
- Labor, input, and shipping costs squeeze thin margins in every county.
- Producers know funding and risk tools exist but lack clear information on what fits them.
- Needs differ by county, reflecting different crops, land tenure, and sales channels.

The program priorities below are ordered by how widely the need was shared across counties. Table 6 summarizes the county emphasis for each.

1. Create a program and eligibility navigator for agricultural funding

Seventy percent of respondents wanted information on available programs, and farms ranked eligibility information above application help. A navigator would maintain one current guide to federal, state, county, and private loans, grants, and tax credits, with plain-language eligibility checklists. Eligibility clinics before major deadlines, followed by application assistance for qualifying farms, would turn information into applications. In Hawai‘i County, outreach should emphasize state and county grants, which only 10% of farms had used.

2. Deliver budgeting and recordkeeping training built on templates and self-paced tools

Fewer than half of farms created a budget, and budgeting was the top finance learning need. Farms preferred templates (45% of respondents) and self-paced resources over intensive coaching. Training should include budget and enterprise templates, QuickBooks and Excel workshops, and recordkeeping for taxes and agricultural exemptions, with one-on-one coaching where requested, as in Kaua‘i County.

3. Expand risk management education, starting with liability insurance in Hawai‘i County

Only 20% of Hawai‘i County farms carried liability insurance, and half wanted to learn about it. Statewide, few farms used crop insurance (8%), contracts (5%), or disaster plans (12%). Workshops with insurance agents, guidance on crop insurance and disaster assistance options for small diversified farms, planning templates for hurricanes, drought, and other hazards, and training on marketing and price contracts would address these gaps.

4. Help producers plan and manage labor costs

Labor costs were the top workforce concern in every county, and 59% of farms could not hire all the workers they needed. Programs could include labor budgeting and management training and information on farmworker housing options, beginning in Maui County.

5. Provide market information

Market research on demand, trends, and pricing was the top marketing need statewide (58%) and in three of the four counties. The program could publish market and price briefs for key crops, including traditional and canoe crops, and tailor market information to each county's main sales channels: farm stands and farmers markets in Hawai‘i County, wholesale buyers in Maui County, and restaurants, CSAs, and online sales in Honolulu. Respondents also wanted associations to handle bulk purchasing, marketing, advocacy, and shared processing; these findings may inform partners that work with producer associations and cooperatives.

6. Offer succession planning and land tenure resources

More than half of respondents were interested in succession planning, and in 2022 nearly half of Hawai‘i's producers were 65 or older. Estate and legal planning sessions with attorneys and planning templates, including guidance for farms on leased land, would address the most common needs. Help connecting land with new farmers (29%) may be better served by partners with land-linking programs. Kaua‘i County, where all respondents were interested and most farms leased their land, is a strong place to begin.

7. Tailor delivery to each county and reach the smaller islands

Needs differed by county, and respondents asked for more support on the neighbor islands and for remote options. Programs should combine online and recorded sessions with in-person delivery through CTAHR's county extension offices and local partners, and include targeted outreach to Moloka‘i and Lāna‘i.

8. Validate priorities with producers and broaden survey reach

Farms and organizations ranked some needs differently, and the survey reached about 1% of the state's farms. New programs should be tested with producers before launch, and a follow-up survey should strengthen outreach in Honolulu, Maui, and Kaua‘i counties so that county estimates are more reliable.

Table 6. County Emphasis for Each Program Priority

Program priority	Hawai‘i County	Honolulu County	Maui County	Kaua‘i County
1. Funding navigator	State and county grants (10% of farms)	Application help (8 of 12)	Program information (8 of 9)	Eligibility information (5 of 6)
2. Budgeting and recordkeeping	Largest demand; accountant use low	Projections and draft feedback	Budgeting (1 of 8 farms budget)	Templates and coaching (5 of 6)
3. Risk management	Liability insurance (20% covered)	Crop insurance, disaster plans (6 of 8)	Crop insurance options	Sales diversification
4. Labor	Labor costs (65%)	Labor costs (9 of 12)	Worker housing (5 of 9)	Labor costs (4 of 6)

Program priority	Hawai‘i County	Honolulu County	Maui County	Kaua‘i County
5. Market information	Farm stands and farmers markets	Restaurants, CSAs, online sales	Wholesale buyers (8 of 9)	Market research (3 of 6)
6. Succession and land	Legal and estate information (60%)	Lower interest (4 of 12 not)	Templates (6 of 9)	All interested; most lease
7. Delivery	In-person and online	In-person and online	Remote access for Moloka‘i and Lāna‘i	One-on-one coaching

Appendix A. Response Tables by County

Each table shows the share and number of respondents choosing each option. Questions about current practices use farm responses; all other questions include every respondent who answered. Check-all-that-apply questions add to more than 100%. Results for Maui and Kauaʻi counties rest on fewer than 10 responses.

Table 7. How do you manage your business finances? (farms)

Option	Statewide (n=63)	Hawaiʻi County (n=42)	Honolulu County (n=8)	Maui County (n=8)	Kauaʻi County (n=5)
Track sales, income, or expenses	76% (48)	76% (32)	63% (5)	88% (7)	80% (4)
Use accounting software (e.g. QuickBooks, Excel)	48% (30)	40% (17)	50% (4)	75% (6)	60% (3)
Create a budget (plan for sales, income, or expenses)	43% (27)	45% (19)	63% (5)	13% (1)	40% (2)
Hire a professional accountant or bookkeeper	19% (12)	10% (4)	25% (2)	38% (3)	60% (3)
I do not track finances	6% (4)	7% (3)	13% (1)	0% (0)	0% (0)

Table 8. What do you want to learn most to manage your business finances? (all respondents)

Option	Statewide (n=84)	Hawaiʻi County (n=57)	Honolulu County (n=12)	Maui County (n=9)	Kauaʻi County (n=6)
Create a budget (plan for sales, income, or expenses)	42% (35)	42% (24)	42% (5)	22% (2)	67% (4)
