CROP RECORDS

FOR HAWAIʻI COFFEE FARMS

Name: _____

Farm: _____

University of Hawai'i at Mānoa
Cooperative Extension
College of Tropical Agriculture and Human Resilience

USDA National Institute of Food and Agriculture
U.S. Department of Agriculture

Western Extension Risk Management Education

This material is based upon work supported by USDA/NIFA under Award Number 2024-70027-4247, Western Extension Risk Management Education Project 16268, and CTAHR POW 20-013 and 20-104 at University of Hawai'i at Mānoa.

RECORD BOOK

NAME: _____ **FARM**: _____

ADDRESS: _____ _____ _____ _____
(Street/PO Box) (City) (State) (Zip)

PHONE: _____ **EMAIL**: _____

TABLE OF CONTENTS

Introduction

Farm Description Records
- Farm Map
- Important Contact Information
- Field Information
- Orchard Inventory
- Building & Equipment Inventory

Daily Activity Records
- Daily Activity Log
- Field Activity Logs
- Calendars

Crops Management Records
- Field Activity Log
- Irrigation Log
- Soil, Leaf, and Tissue Sample Results
- Fertilizer Treatment Log
- Pesticide List (optional)
- Pesticide Treatment Log
- Harvest Log
- Harvest Picker Log

Coffee Pest Management Records
- Coffee Berry Borer Management
- Coffee Leaf Rust Management

Financial Records
- Expenses and Revenues (three versions)
- Monthly Financial Summary
- Annual Financial Summary

Receipt Envelopes

INTRODUCTION

Why keep production records?

- Record keeping is for your benefit.
- Record keeping complies with legal requirements such as for taxes and restricted chemical use applications.
- Farm records help analyze past practices and outcomes, enabling you to identify what was effective and what was not, ultimately supporting planning decisions for your operation.
- Tracking production costs (such as equipment, chemicals, and labor) and sales revenue enables you to track profitability.
- Records are required for taxes, certifications and crop insurance, and sometimes required to obtain loans and grants. They can be useful for receiving better technical guidance from crop consultants, input suppliers, and Extension professionals.

About this record book

- It is designed to assist coffee producers in Hawai‘i with starting or improving record keeping systems for their operations.
- Copy the forms that you need and keep the originals for future use.
- Please feel free to modify the forms included in this book or add new sections to make them more suitable for your operation. We also plan to provide digital versions of these forms in the future.
- This product is provided to you through the University of Hawai‘i at Mānoa, College of Tropical Agriculture and Human Resilience (UH-CTAHR) and is based on the 2012 recordkeeping book developed by UH-CTAHR, the University of Arizona Cooperative Extension, the United States Department of Agriculture (USDA) Risk Management Agency Outreach Program, and the USDA Risk Management Agency Targeted States Program.
- If you have suggestions for improving this book or questions about crop record keeping, please contact us.

SongYi Paik, Assistant Extension Agent, University of Hawai‘i at Mānoa, CTAHR

Stuart T. Nakamoto, Extension Economist, University of Hawai‘i at Mānoa, CTAHR
snakamo@hawaii.edu, (808) 956-8125

FARM DESCRIPTION RECORDS

This section collects general information that is usually entered only once. However, it's a good practice to check your information periodically, perhaps once a year, to see if anything has changed. The contact information allows you to quickly reach the right person without wasting time searching for information by simply referring to the list. A map or diagram of your farm is the starting point for insurance and certification programs. Accurate field information is necessary for determining fertilizer and pesticide application rates, and for making sound financial and crop management decisions. Machinery and equipment information is useful for tax purposes and for making accurate estimates of your costs. Most farms can use all of the following forms.

Farm Map
You could make a map or diagram of your farm starting from your Tax Map Key (TMK) or similar documents, or using GPS (Global Positioning System) tools such as Google Maps, Google Earth, and the Web Soil Survey. Some government programs created by the USDA or the Hawai‘i Department of Agriculture (HDOA) could help you with this. Show your boundaries, fields, buildings, roads, fences, water, landmarks, neighboring areas and what they are used for. At the very least, you should make a rough sketch. Many people name or number their fields or sections of their farm so it is easy to refer to them later.

Important Contact Information
Record information for your farm managers, buyers and suppliers, extension agents and other government resources, industry associations, crop insurance agents, and others that you contact regularly or may need to reach in the case of an emergency.

Field Information
This is the "partner" of the farm map. It contains basic information for each field that may not change. The size of each field, usually in acres or square feet, is important for calculating the amount of fertilizer, pesticides, and other chemicals to apply, and for looking at costs and revenues. An accurate count of the plants could be useful (see Orchard Inventory). You might also include leaf tissue and soil analyses, who took them, and the date they were sampled.

Orchard Inventory
Maintaining your orchard inventory helps you to track key details such as planting dates, tree count, planted area, coffee variety, and other essential information for effective orchard management.

Building & Equipment Inventory
A major use of this information is for income taxes, insurance, and loans (as collateral). You might make a similar form for farm buildings, or include them here if you only have a few.

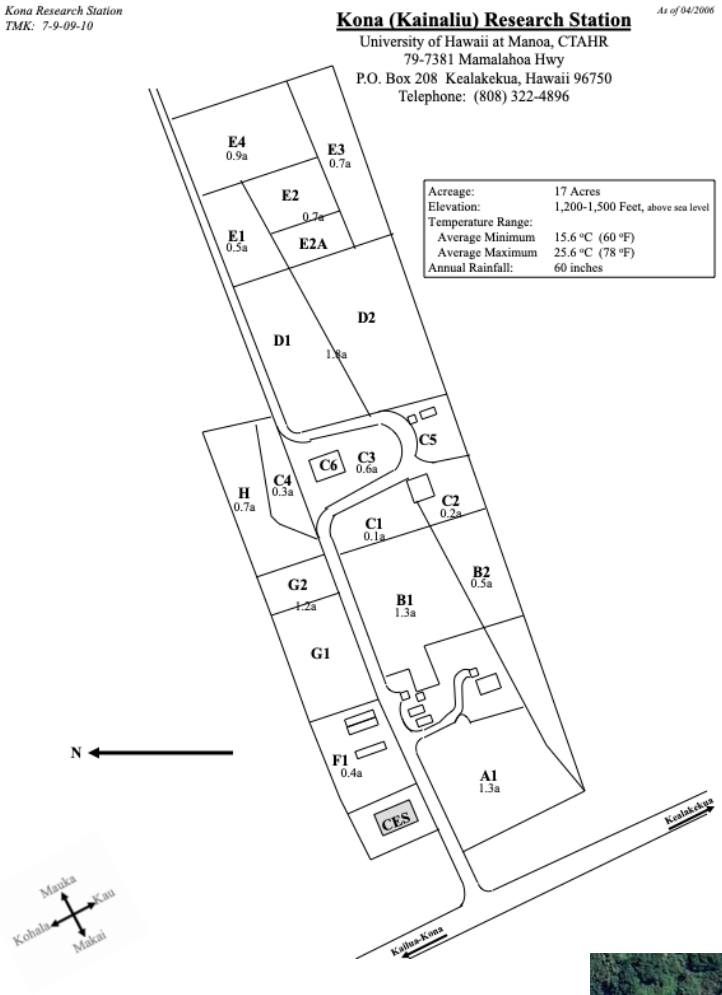

Farm Map

Farm map hints:

- Use Tax Map Key (TMK), GPS plot (USDA NRCS, HDOA), Google Earth, hand-drawn, etc.

- Your TMK number can be found in the State of Hawaii Tax Map at https://filmoffice.hawaii.gov/state-of-hawaii-tax-map-key/

- Your drawing should indicate:
  - boundaries and lengths, fields and field names or field numbers, physical features/landmarks (e.g. rockpiles, lava tube, ponds, streams, gullies/ditches, trees)
  - infrastructure (e.g. roads, fences, buildings, irrigation, utilities)
  - neighboring areas & uses (e.g. cattle pasture, forest, vegetable grower, subdivision).
  - variety
  - date planted, etc.

- Examples of farm maps:

Figure 1. Kona Research Station Map using PPT (left)

On the left is a farm map of the Kona Research Station, drawn using PowerPoint. Using a blank white background makes it easier to add lines and write text that is easy to read.

Figure 2. Kona Research Station Map using Google Earth (right)

On the right is another example created with Google Earth. The aerial photo is useful for identifying nearby planted crops and seeing how close they are to your own plots.

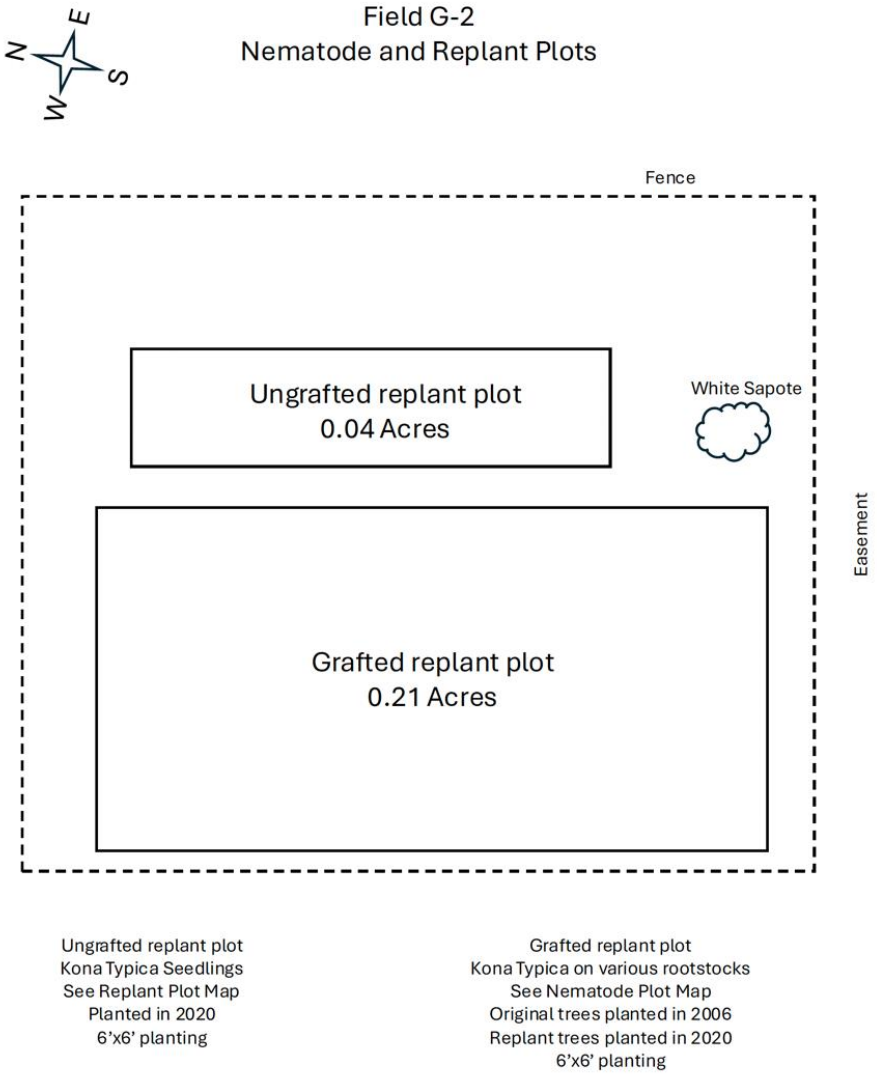

Figure 3. Field G-2 map for coffee trees created using PowerPoint (left)

Figure 4. Field G-2 map for coffee trees created using Google Earth (right)

Important Contact Information

Name	Company	Address	Phone Number	Email Address	Notes

Field Information

Farm/Owner Name: _____

Field Name/ID	Location	Size	Variety	Soil Type	Notes

Notes can include the number of trees, planting dates, pruning style, etc.

Orchard Inventory

Farm/Owner Name: _____

Field Name/ID	Date Planted	Number of Plants	Area Planted	Description & Notes

Notes can include the plant variety, its source, and the type of rootstock used for grafted plants.

Building & Equipment Inventory

Farm/Owner Name: _____

Bldg/Equipment Name	Purchase Date	Purchase Price	Useful Life	Notes

The equipment name can include the manufacturer and ID number for the same make/model, and the notes can include horsepower and fuel type.

DAILY ACTIVITY RECORDS

This section involves forms that we recommend you use every day to record everything that happens related to the farm. This would include activities to grow, harvest, and sell your crop, farm and machinery maintenance, and other activities. You should record what was done, machinery and materials used, and the time involved. All farm revenues and expenses should also be recorded.

You will need to select one of four types of logs. The one you choose should depend on your information needs, how you will use the information, and your own preferences. **Periodically or as needed, information from the logs can be included in the crop management and financial record sections.** There are situations where it is easier to enter the information directly into crop management or financial record forms. In such cases, the suggestion is to also make a general entry into the daily logs. For example, you can write "bought fertilizer" in the calendar and include all the details in the financial logs.

1) Daily Activity Log
2) Field Activity Logs
3) Calendars
4) Notebook/diary/journal

The 1) Daily Activity Log and 2) Field Activity Logs are very similar; however, the Daily Activity Log is used to record activities across the entire farm, while a separate Field Activity Log is used for each individual field if you track field-specific activities. The different columns list the various items that should be recorded. Purchases and sales can also be recorded here, or separately in the Financial Records section.

There are a number of calendar-based record keeping tools that are commercially available. The calendars presented here could be useful for both recordkeeping and for planning purposes. The same information from the daily or field activity logs should be recorded in calendars.

Daily Activity Log

Farm/Owner Name: _____ Dates from _____to _____

Date	Field Name/ID	Activity	Equipment Used & Hrs	Materials Used & Amounts: Fertilizer, Chemicals, Soil Amendments, Water	Labor Hrs Used	Notes

Activities can include weed control, irrigation, pruning, and harvesting. Also purchases and sales.

Field Activity Log

Field Name/ID: _____ Farm/Owner Name: _____ Dates from _____to _____

Date	Activity	Equipment Used & Hrs	Materials Used & Amounts: Fertilizer, Chemicals, Soil Amendments, Water	Labor Hrs Used	Notes

Activities can include weed control, irrigation, pruning, and harvesting. Also purchases and sales.

CROP MANAGEMENT RECORDS

Accurate records of your crop production can be useful for many purposes. Records of chemical treatments for your fields can protect you in the event that your operation is inspected to ensure that you are using pesticides properly and following recommended label uses and rates. Application records are required if you would like to participate in a Certified Organic Program, or similar labeling programs. Records can identify nutritional issues and improve fertilizer efficiency by knowing when, what types, and how much fertilizer to apply for best effectiveness. Records can also help you keep track of problems in your fields, such as recurring pest and disease outbreaks of coffee berry borer, coffee leaf rust, black twig borer, and banana moth, and help you determine when it is time to strip-pick, spray, prune, or perform other treatments. With updated records, you will be able to make more informed decisions about your fields and you may be able to improve your productivity and profit.

All certified applicators of Restricted Use Pesticides (RUP) are required to submit a report to HDOA's Pesticides Branch by January 30th for RUP use in the previous year. Even if no RUPs were applied, a report must still be submitted. Guidance on recordkeeping for RUP applications, developed in collaboration between CTAHR and the HDOA Pesticides Branch, is available at:
https://cms.ctahr.hawaii.edu/epp/Education/Study-Guide-Packets/Recordkeeping

You can select and/or modify forms from those we provide here for your specific needs.

- Field Activity Log
- Rainfall and Irrigation Log
- Soil, Leaf, Tissue Sample Results
- Fertilizer Treatment Log
- Pesticide List (optional)
- Pesticide Treatment Log
- Harvest Log
- Harvest Picker Log

COFFEE PEST MANAGEMENT RECORDS

The coffee industry is one of Hawai'i's most valuable agricultural commodities. However, coffee growers face significant challenges, particularly from three destructive pests: 1) Coffee Berry Borer (CBB), which can cause marketable yield losses and reduced quality; 2) Coffee Leaf Rust (CLR), which can cause premature leaf drop, weakened plants, and reduced coffee cherry production, and 3) Kona Coffee Root-knot Nematode (CRKN). In severe cases, CLR infection plus CRKN infestation and other underlying issues (poor nutrition, drought, banana moth, etc.) can cause trees to die.

CBB and CLR infestations are largely determined by how effectively they were managed in the previous season. Key factors include monitoring infestation and incidence levels, timely pesticide applications, adequate tree nutrition, and implementing proper pruning and strip-picking techniques. The long-term management of CLR and CRKN includes planting or replanting with CLR-resistant coffee varieties grafted on *C. liberica* 'Fukunaga' or 'Meisner' rootstock. These strategies are important to controlling the spread of pests and diseases, and maintaining the health, productivity, and longevity of coffee plants.

Keeping detailed records of activities to manage and prevent pest and disease outbreaks, improve the effectiveness of pesticides, and improve yield is essential. This includes tracking flowering dates, pesticide spray schedules, harvests, pruning times and methods, as well as key observations such as sampling outcomes. As a result, you will have a better understanding of your crop and the efficacy of different management strategies.

	=0-0.99 – Spraying not recommended; will cost more than the expected value of coffee saved from CBB
	=1-1.99-Consider spraying, especially early in the season
	=2-4.99 – Especially early in the season, this is a critical level to start spraying to avoid economic loss.
	=5-9.99 – You are starting to lose money due to CBB damage. Losses will be greater if you don't spray.
	=10-19.99 – You are losing money due to CBB damage, but you may still want to spray.
	=>20 – Processors may reject your harvest. The value of your harvest may not cover picking cost, so consider focusing on your next crop (i.e. strip pick, stump prune)

General Activities		
Date	Activity	Notes

You can include pruning, desuckering, weed whacking/mowing, new or replanting tree, fertilizer and herbicide applications, and other pest treatments (green scale, banana moth, mites, etc.).

FINANCIAL RECORDS FOR AGRICULTURAL OPERATIONS

Accurate and updated financial records for your crop operation can help you see where your money is going and make informed business decisions to improve your operation. How much does it cost to produce a pound of product sold? Records on how much you pay for plants, fertilizer, pesticides, fuel, supplies, equipment, maintenance, and labor and how much you earn per acre of sales can help you answer this question. Your records will show you whether your operation is paying for itself, generating a profit, or if you are supplementing it with other income. You should be able to decide where you can make changes to reduce expenses or increase farm income.

SAVE YOUR RECEIPTS!

If you keep no other kind of financial record, save your sales invoices and receipts for expenses paid throughout the year. Write the five Ps (Product, Price, Place, Persons, and Purpose) on the back of the receipt, and record the information on the logs provided. You can organize receipts by month or by type (fertilizer, fuel, custom services/supplies, etc.). You can use one envelope to collect receipts as they are collected, and another to store them once they are organized. This kind of record keeping takes very little time, but can be well worth the effort in the event that you need to go back and calculate expenses. For example, government disaster assistance programs often require producers to provide copies of receipts to qualify for reimbursement. When applying for credit, such as a Farm Service Agency Loan, producers must supply financial and production records. With invoices and receipts on file, you would be able to create some basic financial records.

MONTHLY FINANCIAL SUMMARY

At the end of each month, use your receipts to calculate your total monthly expenses for fertilizers, pesticides, fuel, custom services/supplies, miscellaneous supplies and equipment, plants, maintenance, labor, and other costs. Also calculate monthly income for cherry, parchment, and/or green coffee sales, cost-share program reimbursements, disaster assistance, etc. Keeping track of this cash flow month-by-month will allow you to be aware of and prepare for times during the year when expenses are the highest.

ANNUAL FINANCIAL SUMMARY

At the end of the year, use your monthly summaries to calculate your annual profit or loss for your operation. If you add the total expenses and income for each month, you can see if you are making a profit or supplementing your agricultural operation with other income. If your operation is not paying for itself, you may be able to make changes to improve the operation.

version 1

Expenses and Revenues

Farm/Owner Name: _____ From _____ to _____

Date	Description	Check No.	Expense	Revenue	Account Balance

version 2

Expense Record

Farm/Owner Name: _____ From _____ to _____

Date	Description	Total Amount	category 1	category 2	category 3	category 4	category 5	category 6	category 7	category 8

Categories can include input costs (plants, pesticides, fertilizers), equipment and tools, gas, fuel, and oil, land and infrastructure, labor costs, irrigation (pumps and water usage fees), insurance, loans, and others.

version 2

Revenue Record

Farm/Owner Name: _____ From _____ to _____

Date	Description	Total Amount	category 1	category 2	category 3	category 4	category 5	category 6	category 7	category 8

Categories can include crop sales, grants and subsidies, land lease income, agritourism, and other sources of revenue.
